Huy Hoang

Scenario:

You wake up one morning watching the news and hear about a virus that could potentially kill you. It is called COVID-19 and research shows that you can reduce the chance of getting the virus by wearing a face mask. You want to find a mask that suits your needs.

Task 1: Go on the app and select one of the mask selections that suits your needs.

Task 2: Browse through the designs, comfort masks, and protections.

Task 3: You can create a custom mask as well, go to the custom section and start by selecting the color, design, and layers.

Notes:

Things to fix:

- Fix the color section where there's a + and a – because you're not actually adding a color. You're selecting one.
- Change the design section as well where it's a + and a – because you're selecting a design, not adding one.

Things to keep:

- Keeping the 4 mask section where the user chooses one at the start.
- The end result where the user can see the design, color, layers, and price of the final custom mask.
